Hematopathology

Synopsis

The world's leading reference in hematopathology returns with this completely updated second edition. Authored by international experts in the field, it covers a broad range of hematologic disorders -- both benign and malignant -- with information on the pathogenesis, clinical and pathologic diagnosis, and treatment for each. Comprehensive in scope, it's a must-have resource for both residents and practicing pathologists alike. Authored by the chief architects of the WHO classification in neoplasms of hematopoietic and lymphoid tissue. Covers the newest diagnostic techniques, including molecular, immunohistochemical, and genetic studies. Confirm or challenge your diagnostic interpretations by comparing specimens to over 1,000 high-quality color images. Boasts detailed, practical advice from world leaders in hematopathology. Places an emphasis on pathologic diagnoses, including molecular and genetic testing. Updated with the most current WHO classifications of hematologic disease, including lymphoma and leukemia and peripheral T-cell lymphomas. Covers hot topics in hematopathology, such as the latest genetic insights into lymphoma and leukemia; the new nomenclature for myelodysplastic syndromes; new developments on the subject of Grey zone lymphoma; and much more.

I love this book. I'm a hematopathologist and I feel like it is basically an extended edition of the WHO, it is as comprehensive as the WHO but with much more detail and differentia diagnosis, I love it!!! Would highly recommend!!

Elsevier, in collaboration with Inkling, has crippled online access to this reference. Until February, 2014, Elsevier's ExpertConsultBook online reference books have been fantastic - easy to navigate, intuitive to search across your titles, and efficient to use. Elsevier has shut that down and replaced it with Inkling's clumsy e-book reader. Easy to read. Not easy to use as online reference to find answers to particular diagnostic problems. With ExpertConsult/Inkling you can no longer search across your purchased books at one go. You have to open and search within each book individually. Open your online book and you get three columns: a navigation column with list of chapters, a reading column, and a notes column (wasting valuable screen space). You have to click the search icon to get a text entry box. Search results then replace the index in the navigation column, 10 at a time, 4-5 visible on a typical computer screen. To review your search results you have to scroll down through the first 10, then click next, then scroll down through the next 10, then click next, ten at a time. The contexts of individual search results are obscure. It shows a little text where your search term appears, but not which chapter or section it is in. Figures (often lots of them) are included in your results list. Individual search results are headed with figure number (not caption, not chapter or section heading) or sub-section titles. Even in the reading pane you can't see chapter and section titles, so you don't know what part of the book you're in. You are limited to linear access through the book - with links to previous and next sections at the top and bottom of the reading pane. To get to the next sub-section you have to scroll down to the bottom of the current sub-section. In order to navigate the index to different chapters or sections you have to exit your search results to get back the index pane.

I am not big on writing reviews; however, this book deserves a comment. The chapters are very well written and takes you in depth with every disease. I like the lymphoid neoplasms chapters little more than myeloid. They are written better than the WHO and enable you to understand the background and the classifications in depth. The only draw back I would say is sometime I feel it contains a lot of academic nonsense; but I must say it is limited to a few number of pages. Good review to use

before during your fellowship and may be a bench review during sign-out. The online version of the book is excellent. Overall, it is worth buying it.

I love this book. As the previous reviewers commented on, the book is a very comprehensive reference textbook on hematopathology that is up to date with the current 2008 WHO Classification. It covers both malignant and benign heme in a comprehensive and readily understandable format with many good diagrams and color microphotographs. My favorite part of the book are the pearls which I have found to be very helpful in signing out difficult cases..

its big but overwhelming. usually just use the WHO book. plus my practice partner (hemepath) did not recommend it at all.
