For those who are already ophthalmologists or are more senior ophthalmology residents and have a sound basis in the field, this book is not for you. However, medical students, non-ophthalmologists physicians or allied health professionals in primary care fields, or even ophthalmology first- or second-year residents will learn much from this book. To better understand what subjects are covered, here are the chapter titles:Chapter 1: The Eye ExaminationChapter 2: Acute Visual LossChapter 3: Chronic Visual LossChapter 4: The Red EyeChapter 5: Ocular and Orbital InjuriesChapter 6: Amblyopia and StrabismusChapter 7: Neuro-OphthalmologyChapter 8: Ocular Manifestations of Systemic DiseaseChapter 9: Drugs and the EyeThe book itself is in full-color with pictures of the eye and fundoscopic examination where applicable. The text is written in plain English and avoids overly-technical terms. An easy read.
